                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 12
US-09-328-352-5845
US-09-328-352-5845

Sequence 5845, Application US/09328352

Patent No. 656258

GENERAL INFCRMATION:

APPLICANT: Gary L. Breton et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER

TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: GTC99-03PA.

CURRENT APPLICATION NUMBER: US/09/328,352

CURRENT FILING DATE: 1999-66-04

NUMBER OF SEQ ID NOS: 8252

# ALIGNMENTS

The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastrilis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is the proteins, useful as vaccines for raising immune response in animals.                    The present sequence is a H. pylori cytoplasmic protein. The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypetide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The genomic sequence of H. pylori (ArCC 55679) was determined from overlapping contigs generated by rechanically shearing the bacterial DNA. The sequences were analysed for OFF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide production, e.g. in B. coli hosts

This sequence represents an H. pylori cytoplasmic protein. Helicobacter pylori has been strongly linked to chronic gastritis and duodenal ulcer disease. The nucleic acid sequences of the invention are used to evaluate compounds, especially activators or inhibitors of bacterial life cycle, for the ability to bind an H. pylori nucleic acid sequence. The nucleic acid sequences, and corresponding proteins, are also useful for acid sequences, and corresponding proteins, are also useful for meleic acid sequences for immunising subjects against H. pylori or for use in detecting the presence of Helicobacter species in a sample. Antisense nucleic acid sequences of these sequences are used to inhibit expression of a gene from Helicobacter species. H. pylori whole genomic DNA was isolated and nebulised to a median size of 2000 bp. Purified DNA care blunt-ended and ligated to unique BstXI-linker adapters in 100-1000 fold molar excess. These linkers are complementary. Therefore the linkers will not concatemerise nor will the cut vector re-ligate tiself easily. The linker-adapter inserts were ligated to each of the 20 pWPX vectors to construct a series of shotgun subclone libraries. The number for this sequence was obtained from the related specification,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B asatritus, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. pQE/HP30 plasmid DNA encoded protein
                                                                                                                                                                                                                                                                                                                                                                          Novel Helicobacter proteins, HP30 and HP56, and nucleic acids encoding the proteins, useful as vaccines for raising immune response in animals.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             à
                                                                                                                                                                                                                                                                                                                                                                      This sequence represents a H. pylori cytoplasmic protein. The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypetide binding compounds, useful as potential H. pylori infe cycle activators or inhibitors. The genomic sequence of H. pylori (ARCC 5679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide production, e.g. in E. coli hosts

invention. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroducdenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and ducdenal ulcers. They can also be used for the production of antibodies. The products can also be used for detection and diagnosis
                                                                                                                           GHPO protein; Helicobacter infection; gastroduodenal disease; gastritis; peptic ulcer disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated Helicobacter polynuclectides - used to develop products for the diagnosis, prevention and treatment of Helicobacter infections and gastrointestinal diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The inventor is useful for producing an immune response. It is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with a felicobacter. Fharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcars, gastric cancers such as adenocarcinose, and low grade B cell Immedical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. pQE/HPS6 plasmid DNA encoded protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              132

                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. HP30-derived peptide
                                                                                                                                                                                                                                                                                                                                                                Novel Helicobacter proteins, HP30 and HP56, and nucleic acids encoding the proteins, useful as vaccines for raising immune response in animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     HP30; HP56; immune response; therapy; Helicobacter infection; vaccine; type B gastritis; antiinflammatory; adenocarcinoma; defense mechanism; low grade B cell lymphoma; virulence; antibacterial; gastric cancer; immunostimulant; cytostatic; peptic ulcer.

The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. HP30-derived peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel Helicobacter proteins, HP30 and HP56, and nucleic acids encoding the proteins, useful as vaccines for raising immune response in animals.
                                                                                                                                                                                                                                                                                                                                  Movel Helicobacter proteins, HP30 and HP56, and nucleic acids encoding
the proteins, useful as vaccines for raising immune response in animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            HP30; HP56; immune response; therapy; Helicobacter infection; vaccine; type B gastritis; antiinflammatory; adenocarcinoma; defense mechanism; low grade B cell lymphoma; virulence; antibacterial; gastric cancer; immunostimulant; cytostatic; peptic ulcer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .:

Claim 7; 

invention relates to Helicobacter HP30 or HP56 polypeptide and Page 116; 127pp; English.

Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. HP30-derived peptide peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating disorder or disease associated with infection of an animal with

Novel Helicobacter proteins, HP30 and HP56, and nucleic acids encoding the proteins, useful as vaccines for raising immune response in animals.

Claim 7; Page 115; 127pp; English

The invention relates to Helicobacter HPDO or HPDE polypeptide and immune response. It is useful for preventing, treating or ameliorating an disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastrifis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as bost defense mechanisms. The present sequence is Helicobacter sp. HP30-derived peptide

The novel breast cancer calls, but are not present in the nuclear matrix of chem normal breast tissue. The invention also encompasses fragments of from normal breast cancer diagnosis. The breast cancer matrix of proteins of the invention or fragments thereof may be detected in a sample of breast cancer diagnosis. The breast cancer marker cancer diagnose breast cancer diagnosis and detected in a sample of breast cancer. Nucleic acids encoding the breast cancer. Nucleic acids encoding the breast cancer associated proteins may also be used to prepare antibodies, particularly monoclonal antibodies, which may be used to detect or diagnose breast cancer. Nucleic acids encoding the breast cancer associated proteins may also be used in the diagnosis and detection of breast cancer, and in the isolation of DNA or protein sequences which may increase cancer associated proteins. The present sequence represents the full-length breast cancer associated

                                                                                                                                                                 ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   48 SGAEĞIRVEDIMARIATKLGYPESNSFVINIVIEPVLHNEAYPRL------YRIKIRDI 100

Novel Helicobacter proteins, HP30 and HP56, and nucleic acids encoding the proteins, useful as vaccines for raising immune response in animals. N-PSDB; AAD44513.

```
The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B agastrils, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. PQE/HP30 protein
Novel Helicobacter proteins, HP30 and HP56, and nucleic acids encoding the proteins, useful as vaccines for raising immune response in animals.

                                                                                                                                                                       셤
                                                The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, wirulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. HP30 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120

The present sequence is a H. pylori cytoplasmic protein. The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori infe cycle activators or inhibitors. The genomic sequence of H. pylori (ARCC 5679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for ORF of all least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or experted membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide production, e.g. in E. coli hosts

Helicobacter pylori nucleic acid sequences and related polypeptide(s) useful for vactimes to treat or prevent H. pylori infection, and to detect Helicobacter.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents an H. pylori cytoplasmic protein. Helicobacter pylori has been strongly linked to chronic gastritis and duodenal ulcer disease. The nucleic acid sequences of the invention are used to evaluate compounds, especially activators or inhibitors of bacterial life cycle, for the ability to bind an H. pylori nucleic acid sequence. The nucleic acid sequences, and corresponding proteins, are also useful for acid sequences, and corresponding proteins, are also useful for generating vaccines for immunising subjects against H. pylori or for use in detecting the presence of Helicobacter species in a sample. Antisense nucleic acid sequences of Helicobacter species in a sample. Antisense of a gene from Helicobacter species. H. pylori whole genomic DNA was colared and nebulised to a median size of 2000 bp. Purified DNA fragments were blunt-ended and ligated to unique BstXt-linker adapters in 100-1000 fold molar excess. These linkers are complementary to the BstXI-cut pMPX vectors, while the overhang is not self-complementary. Therefore

the linkers will not concatemerise nor will the cut vector re-ligate itself easily. The linker-adapter inserts were ligated to each of the 20 pWFX vectors to construct a series of shogun subclone libraries. The purified DNA samples were then sequenced. Note: The ORF/protein reference number for this sequence was obtained from the related specification,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents a H. pylori cytoplasmic protein. The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The genomic sequence of H. pylori (ARCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for DR omputer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide production, e.g. in B. coli hosts
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CIGACCAGCTCCATAGAATACAAAAGGCATGGCGATGATTACGCTAAATACGCAGAAAGA 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  540
                                                     The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcars, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. pQE/HP30 plasmid DNA encoded protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    360

The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with the icobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastric tancers such as adenocaccinoma, and low grade B peptic ulcars, gastric cancers such as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. pQE/HP56 plasmid DNA encoded protein
                                                                                                              240

                                                                                                                                                                                                                                                                               This sequence represents a Helicobacter pylori GHPO protein of the invention. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and atrophic gastricis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used for

The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B asstritis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. HP30-derived peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel Helicobacter proteins, HP30 and HP56, and nucleic acids encoding the proteins, useful as vaccines for raising immune response in animals.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. HP30-derived peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GIAACCATACCGGCATGCATTGIGGTTGCCACTTTACGCCTAAAAACACAGCAAGCCAAT 726

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. HP30-derived peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              21 TyrGlnLeuAlaval11eValAlaAsnAlaValAlaLysThrIleLeuGlyArgGlyLeu 40

The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphona. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. HP30-derived peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TIGGAAGAAIGGAIGAIGAAGAAGIGAAGAAAIGIGGGAIGAAITAICCAIAAAAAC 420

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. HP30-derived peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel Helicobacter proteins, HP30 and HP56, and nucleic acids encoding the proteins, useful as vaccines for raising immune response in animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B fell lymphoma. The invention is useful as reagents for clinical or

The present sequence represents a breast cancer-associated protein fragment for use in a method for diagnosing breast cancer in tissue or body fluid by detecting one or more breast cancer-associated protein(s). Alternatively a nucleic acid encoding a breast cancer-associated protein is detected in the sample by the use of a nucleic acid probe. The breast cancer-associated protein useful in diagnostic assays and kits for breast cancer detection. The proteins are also useful in screening for inhibitory compounds and monitoring effectiveness of treatments. The antibody, or pharmaceutical compositions containing the antibody or the inhibitory compound, can be administered to patients to treat breast cancer. The methods allow reliable and early diagnosis of breast cancer, or prediction of its but not in non-cancerous breast cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               86 TIGGIAAAGACGGCGAAAAAGACACAAIGAAAAACIGACCACCACCICCAIAGAAIACAAAA 145

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
